

HINGE DOORSTOP

Production Quote — University Housing

Prepared by: Jeremy Hulse
Prepared for: Todd Westenskow
Order: 500 units (504 produced — 4 spares included)

Quote #: DS-500-0615
Date: June 15, 2026
Valid until: July 15, 2026

This quote covers **500 custom hinge-mounted doorstops** for your building-maintenance crews. The hinge design was developed specifically for your doors after the simple wedge proved unreliable across the varied door heights in your buildings. It holds doors wide open without relying on friction, sits in the hinge instead of the walkway, and requires no bending to place or retrieve.

The product

Design	Hinge-mounted doorstop — holds the door open extra wide, friction-free.
Material	Bambu PETG Basic — tough, impact- and heat-resistant.
Build	6 perimeter walls, 5% infill — designed to handle the abuse of regular use.
Per unit	~15.2 g of filament; ~183 print-hours for the full run.
Protective by design	Engineered so the inexpensive stop is the part that gives under extreme abuse — protecting your doors and hinges, not the other way around. Replacements come from the spare stock.

Pricing

Two line items: my commission, and the filament — a maintenance supply you purchase directly at cost.

Item	Amount	Notes
Commission — design + production	\$250	Covers engineering, the full production run, and quality control.
Filament — Bambu PETG Basic (10 spools)	~\$99	Purchased by you directly at cost (\$9.89/roll at 10+ — \$98.95 for 10 with free shipping, vs \$100.74 for 8).
All-in to you	~\$349	Compares with ~\$300 in materials alone for wood wedges, before any shop labor — for a purpose-built solution the crews prefer.

Commission covers the engineering and the full production run — not just material. It does not change with material or wall count; the filament is yours to purchase, so heavier builds would only add to your supply cost, not my fee. The 6-wall spec is the lightest build designed to stand up to daily abuse, which keeps your material cost down.

What's included

- 500 doorstops as ordered, plus 4 spare units at no additional charge (504 produced).
- **Replacement contingency (2-year) — no commission.** If a unit ever fails in normal use within two years of delivery, I'll reprint it at filament cost only — and with free reprints on any defects, you're covered either way.
- Counting, sorting, and quality check of every unit.
- Free reprints of any units with print defects.

A note on the spares: I print 36 to a plate, so a full 14-plate run lands at 504. The 4 extras come at no charge and double as your replacement stock — I'd recommend keeping them on hand.

Timeline

Standard production on a single printer is **about 11 days** for the full run, included. If you'd like to validate the design first, I can deliver a **free pilot batch** (about 72 units) for your crews to use for a week before I complete the rest — no extra cost, adds a few days. Faster turnaround is available on request if you're time-pressured.

Terms

- This quote is valid for 30 days from the date above.
- Filament is purchased by you directly; production begins once spools are on hand.
- Commission covers defect reprints and the replacement contingency; a redesign or change of spec would be quoted separately.
- Prices are in USD.

Acceptance
